

# K-MAX<sup>®</sup> & Bambi Bucket<sup>®</sup>

## The Perfect Pair for Initial Attack

The world's most modern firefighting helicopter, the K-MAX, now has the world's most modern aerial firefighting tool – the custom designed model BB680K K-MAX Bambi Bucket.

This compact lightweight bucket allows the K-MAX to be a total “fly away” initial attack system. The K-MAX/BB680K Bambi combo can now arrive on-site faster, and then in seconds, be equipped with the Bambi Bucket and be ready to attack with 680 USG (2575 liters) of fire suppressant.

## Initial Attack Bambi Bucket — BB680K

The new custom-designed model 680K was developed to fit perfectly inside the minimal K-MAX cargo compartment, without sacrificing bucket capacity. Gone are the slower flights with external load equipment and gone are the waiting periods for the ground crew to catch up with bulky rigid buckets.

The K-MAX bucket is responsive and stable in flights. Pilots can pinpoint the target with complete control and accuracy.

The K-MAX/Bambi Bucket system allows access to most water sources, previously unavailable to tanked helicopters, thus significantly reducing turnaround time and maximizing volume/hour performance.

All these advantages state one thing - the 680K Bambi Bucket is the perfect initial attack tool for the K-MAX.

## Extended Attack Buckets & Options

### TORRENTULA VALVE<sup>™</sup> Bambi Bucket & **PowerFill I**<sup>™</sup>

The Torrentula Valve Bambi Bucket will increase the K-MAX pilots' scope of work in extended attack operations. With multiple drop capabilities from a single load, operational flexibility is dramatically enhanced.

The PowerFill I option adds even greater versatility to the firefighting capabilities of the K-MAX. Operators can fill from water sources as shallow as 18 inches (46 cm), which translates into more water drops per hour and less fuel spent traveling to deep water filling sites.

### Sacksafoam

The Sacksafoam foam injection reservoir pump is installed directly into the Bambi Bucket. The system control unit includes a foam dispense timer and a drop counter to give the K-MAX maximum efficiency out of every gallon of water and foam.
